Research Brief 367: Dioxin-Like Compounds Shift the Balance of White Blood Cells

Dioxin-like compounds can alter how white blood cells develop and do so in ways that current risk assessment methods fail to predict, according to a study from the Michigan State University Superfund Research Program (SRP) Center.

The NIEHS Superfund Research Program (SRP) supports research at universities and small businesses to solve complex environmental health problems, reduce hazardous contaminant cleanup costs, decrease exposure to contaminants, and improve human health.
