PETER COOPER	NYD980530265	F	Definite Planned	Recreational	The Peter Cooper Corporation's (PCC) plant manufactured animal glue in Gowanda from 1904 until 1972, and industrial adhesives from 1972 until the plant closed in 1985. Between 1925 and October 1970, PCC used the northwest corner of the property to pile sludge from the manufacturing process. The waste contains elevated levels of chromium, arsenic, zinc, and some organic compounds.	Recreational land use would dominate any redevelopment of the Peter Cooper Federal Superfund Site in Gowanda under a concept drawn up by the Cattaraugus Creek Basin Task Force. The plans were discussed during a meeting in Gowanda Middle School on Thursday night. Among the recommendations were picnic areas and playgrounds, walking, running and biking trails, and fishing access with a possible pier accessible to the disabled. Several athletic fields, a skate park, restrooms, a small boat-launch and camping facilities are also listed. Some commercial developments such as lodging and facilities to house specialty businesses to serve rafting, fishing and other sporting enthusiasts would benefit the local economy, officials said.
