American Revolution: Fall of 1777

Washington's Retreat: Brandywine to Valley Forge

American Revolution: Fall 1777

Warwick Furnace: Forging & Proving Cannon

American Revolution: Fall 1777

Bury All Cannons at Warwick Furnace:

when the Hessians were passing through the town, <u>the bell was rung</u> to summon the citizens to bury the cannons cast at the furnace that were awaiting delivery to the Continental Army.

Objective: Find The Cannon

250 Years After Hasty Burial, Rediscover Warwick Cannon

Drone Magnetometer Surveys

UAS-based Magnetic Sensor Payload

- Combines Mini-Atomic MAGs, RTK-GPS, IMU, Radar Altimeter, Telemetry, Processing
- Heavy-lift UAS (1-10 kg payloads)
- Automated airframe & survey control

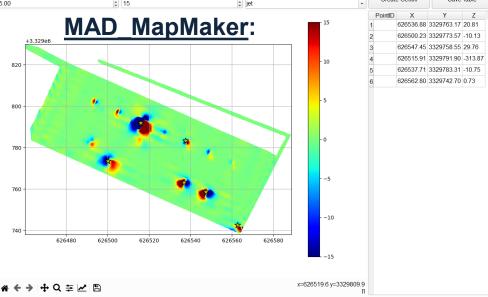

Drone Magnetometer Surveys

APEX 3DEM: Object Classification

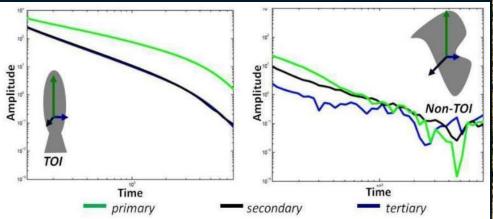

white river

APEX 3DEM: Object Classification

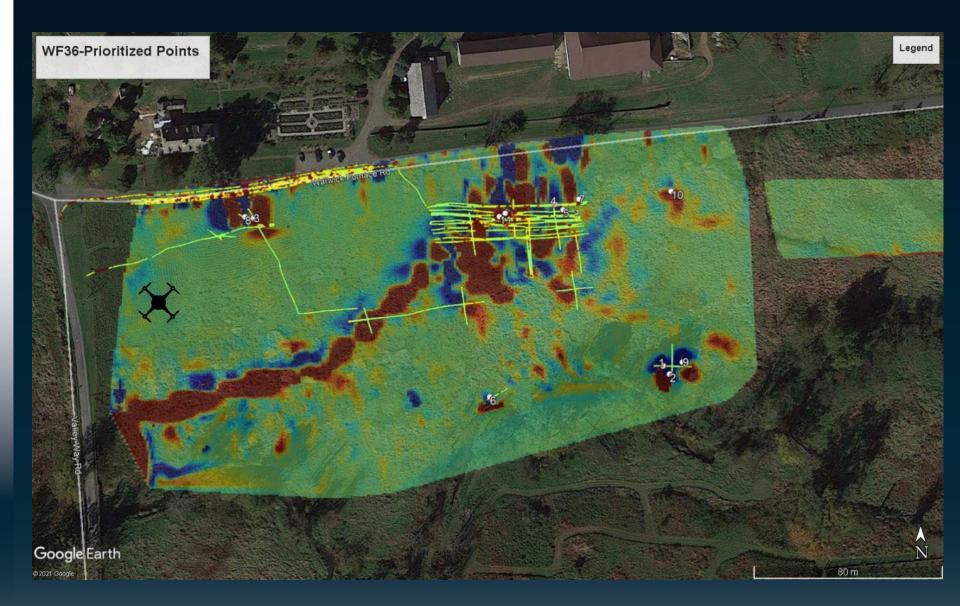

Controlled Source 3D Cart Unit

- Triaxial EM Transmitters
- Array of Multi-axis Receivers
- Dynamic Classification Analyses
- Inverted Parameters Unique
- <u>Yield Intrinsic Features</u>: *size, shape, composition, metal thickness*

MagPi + APEX Combined

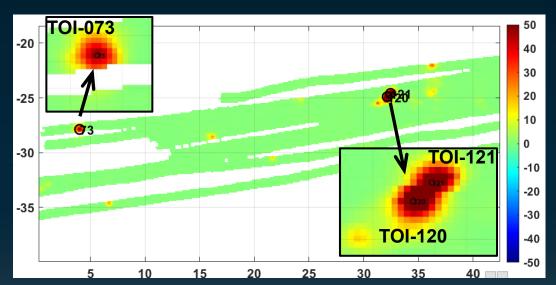

white river technologies

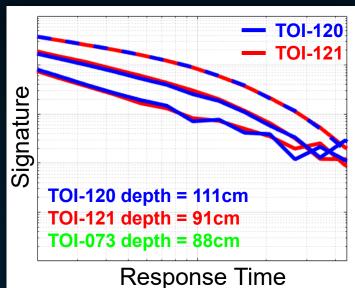

APEX 3DEM Inversions

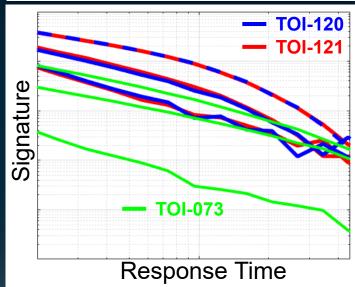

Inverted Target-of-Interest Signatures

- Same Signatures for TOIs 120 & 121
- Likely large iron-rich cylinders
- Smaller Irregular TOI-073
- Listed as highest priority items to dig first

TOI 120 & 121 Are Same Object Type

Prioritized Dig List

12 Dig Locations Recommended

- Based on MagPi & APEX Inversions
- First 5 Dig Locations Resulted in Discoveries
- 4 Cannons Were Discovered
- Cannonball and Other Artifacts Were Also Found

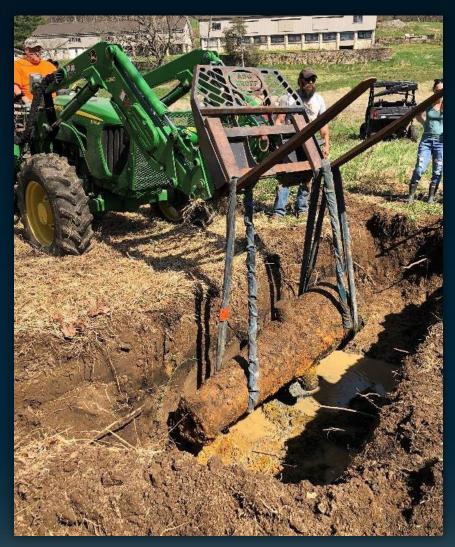

white river

Dig Site #1

First Dig Site Uncovered a Cannon (and Cannonball)

DISCOVERY: Dig Sites

Warwick Cannon (4500-4800 lbs each)

Synopsis

- Washington's cannon suspected to be hidden at Warwick Furnace in Fall of 1777 (246 years ago)
- Little known of MAG or EM signatures
- Efficient combination of unmanned airborne MAG, limited ground MAG, and high-resolution APEX 3D-EM deployed
- Unique characterizations from "advanced geophysical classification" inversions using APEX 3D-EM
- Prioritized dig-list resulted in discovery of cannon and artifacts at first 5 locations
