

AQUATIC MACROINVERTEBRATES AND REGION 7 SUPERFUND SITES

Catherine Wooster-Brown and Venessa Madden
Ecological Risk Assessors

21st Annual NARPM Training Program

Kansas City, Missouri

May 16–20, 2011

www.epanarpm.org

Aquatic Macroinvertebrates

- ◆ Can be found in all streams
- ◆ Are sampled by every state for their water program
- ◆ A lot of information exists for aquatic invertebrate pollution tolerance
- ◆ Macroinvertebrates can help answer aquatic questions at your sites

E

T

Annapolis Lead Mine Site

Annapolis, Missouri

Approximately 10 acres

Annapolis, Missouri located in Iron County

21st Annual NARPM Training Program

3

Kansas City, Missouri

May 16–20, 2011

www.epanarpm.org

Sutton Branch Creek at the Mine Waste Entry Point

Big Creek, a Missouri Outstanding Natural Resource Water

21st Annual NARPM Training Program

Kansas City, Missouri

May 16–20, 2011

www.epanarpm.org

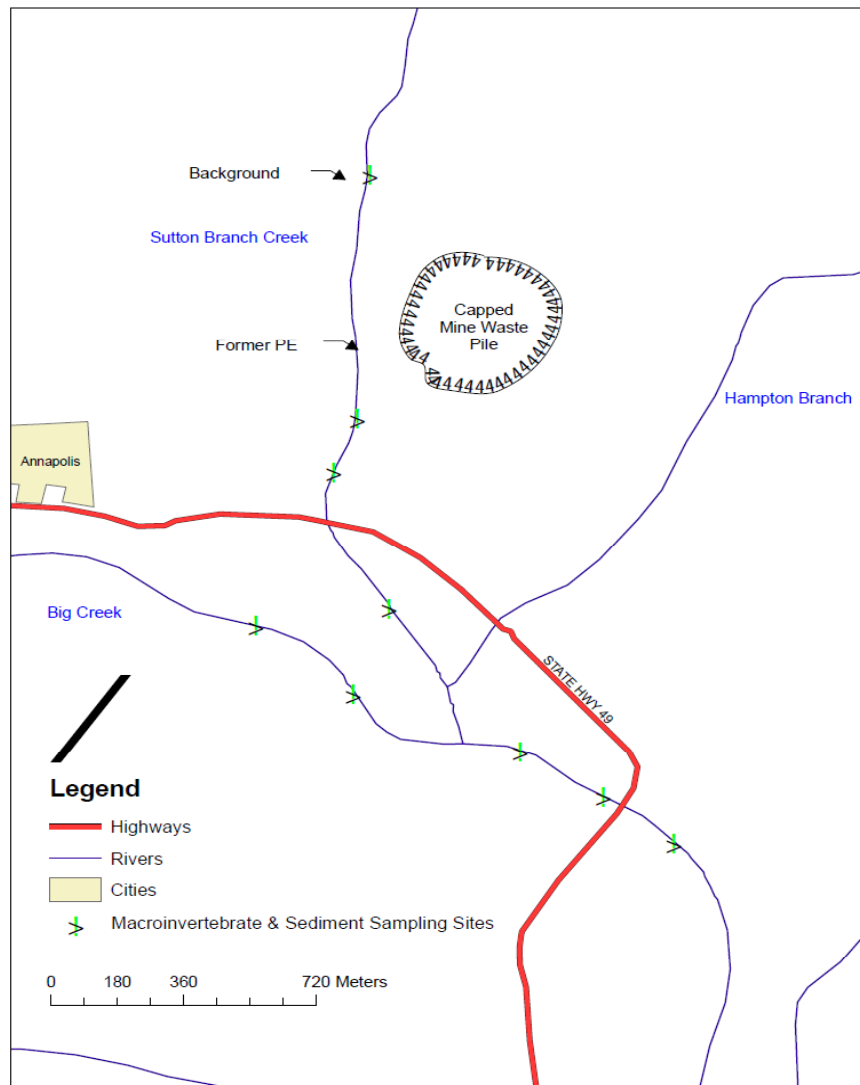

Figure 1. Macroinvertebrate & Sediment Sampling Locations, Annapolis Lead Mines Site, EPA, 2005.

%EPT for Sutton Branch Creek Below Point of Entry

Tri-State Mining Site, Missouri, Kansas, and Oklahoma

Approximately 2,500 square miles

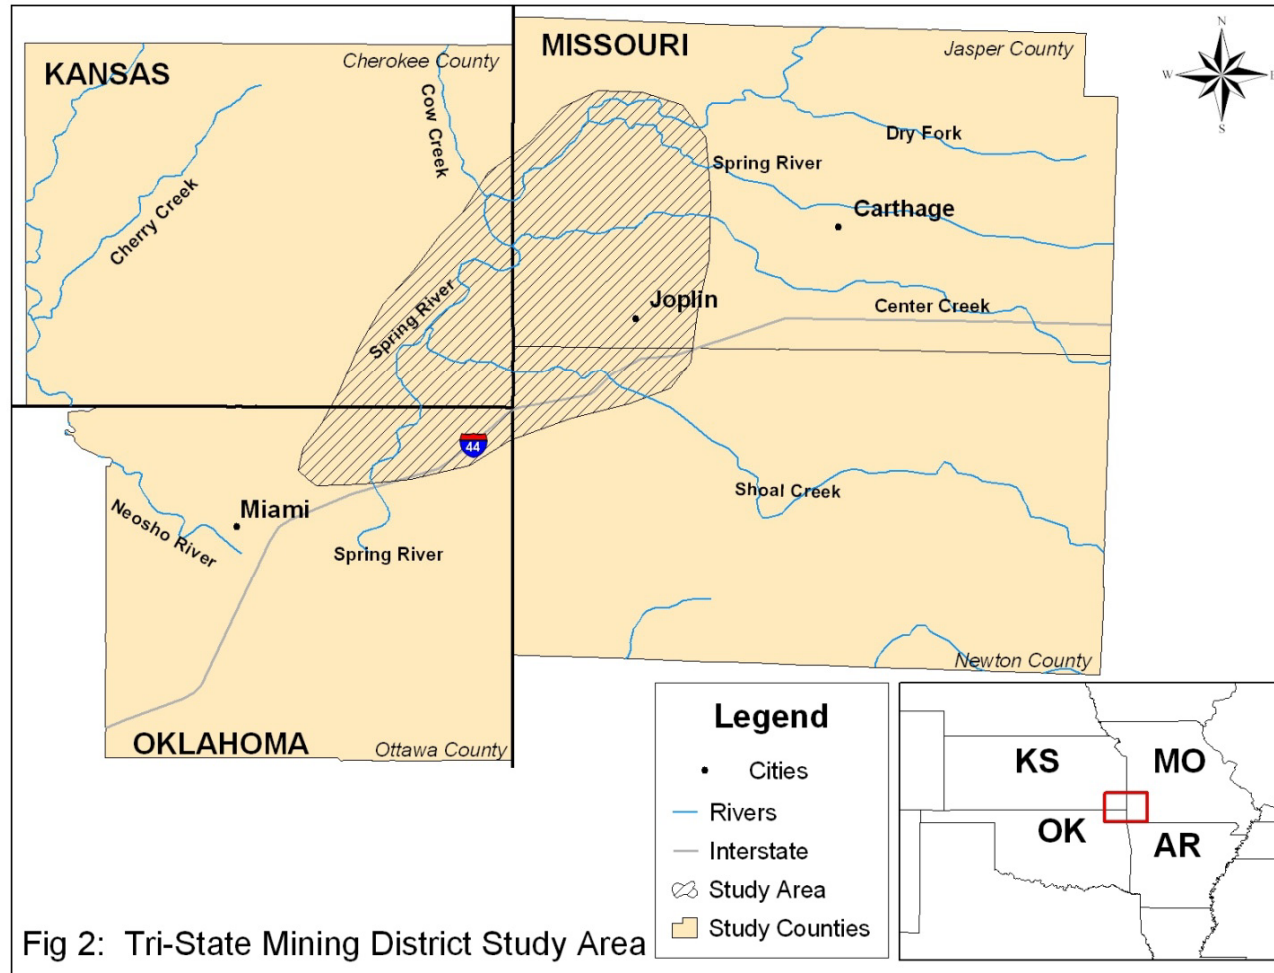

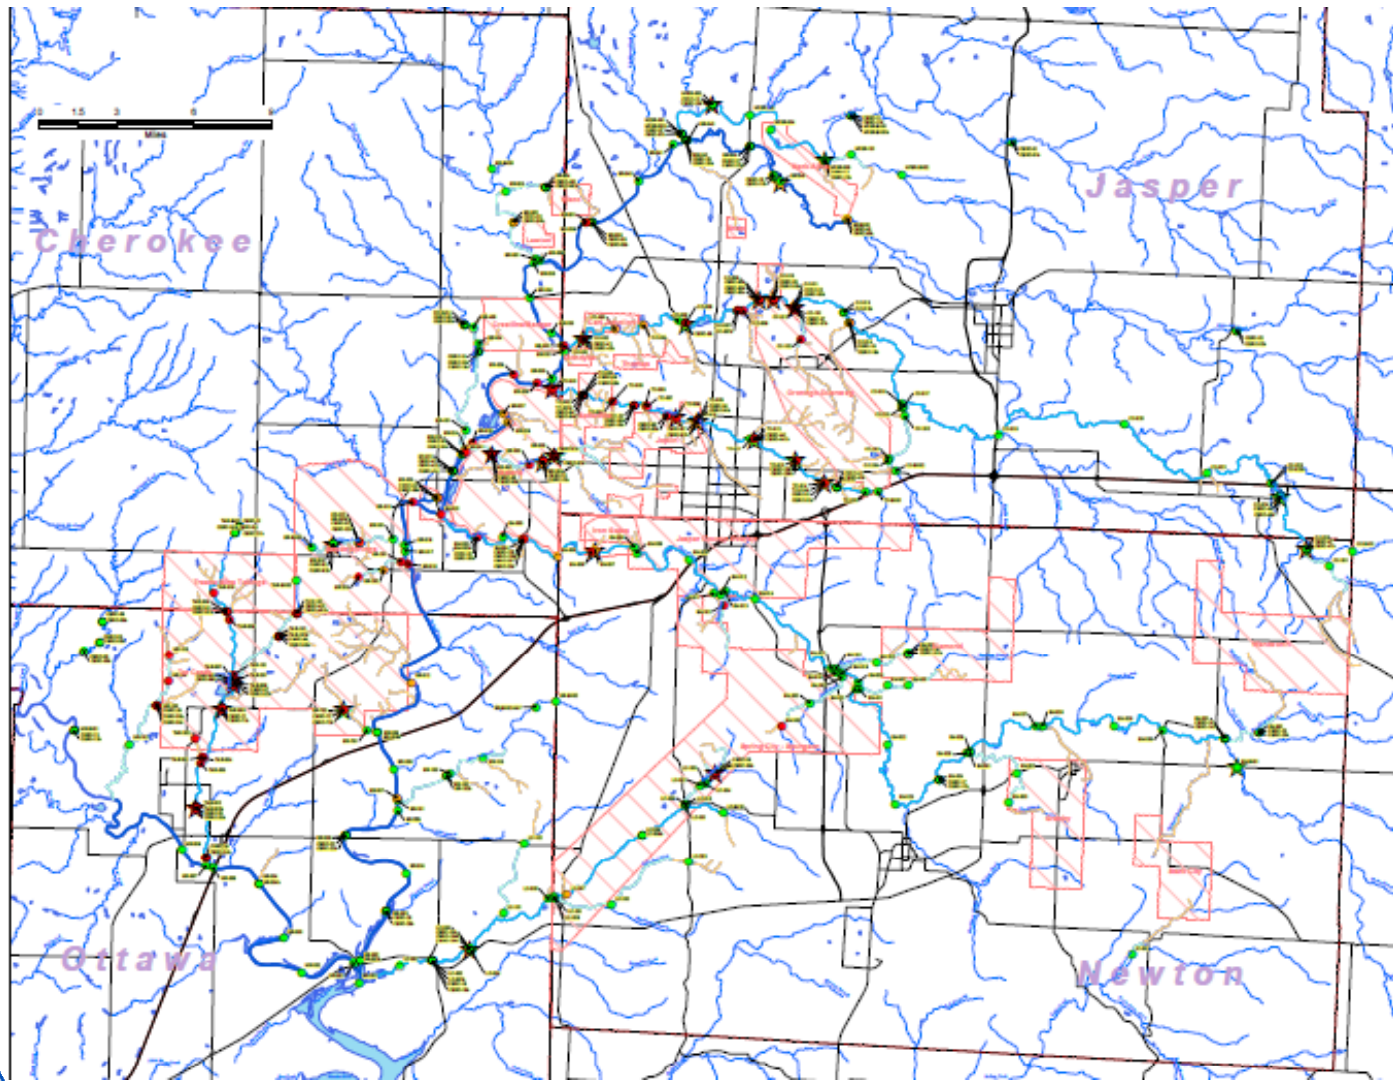

Fig 2: Tri-State Mining District Study Area

Large Rivers, Small Streams, and A Lot of Tributaries

21st Annual NARPM Training Program

Kansas City, Missouri

May 16–20, 2011

www.epanarpm.org

Sediment Quality Triad Approach

Chemistry Concentrations

- Sediment
- Pore water
- Surface water

Toxicity Studies

- Sediment

Site Specific Macroinvertebrate Community Studies

- Richness
- Ephemeroptera, Plecoptera, Trichoptera (EPT)

Mean Taxa Richness per Waterbody

Figure 5. Mean taxa richness per creek from macroinvertebrate samples collected by the EPA, June 2009. Richness 0-7 in red is considered poor, 8-15 in yellow is fair, and >16 in green is good.

21st Annual NARPM Training Program

11

Kansas City, Missouri

Big River Ecological Assessment

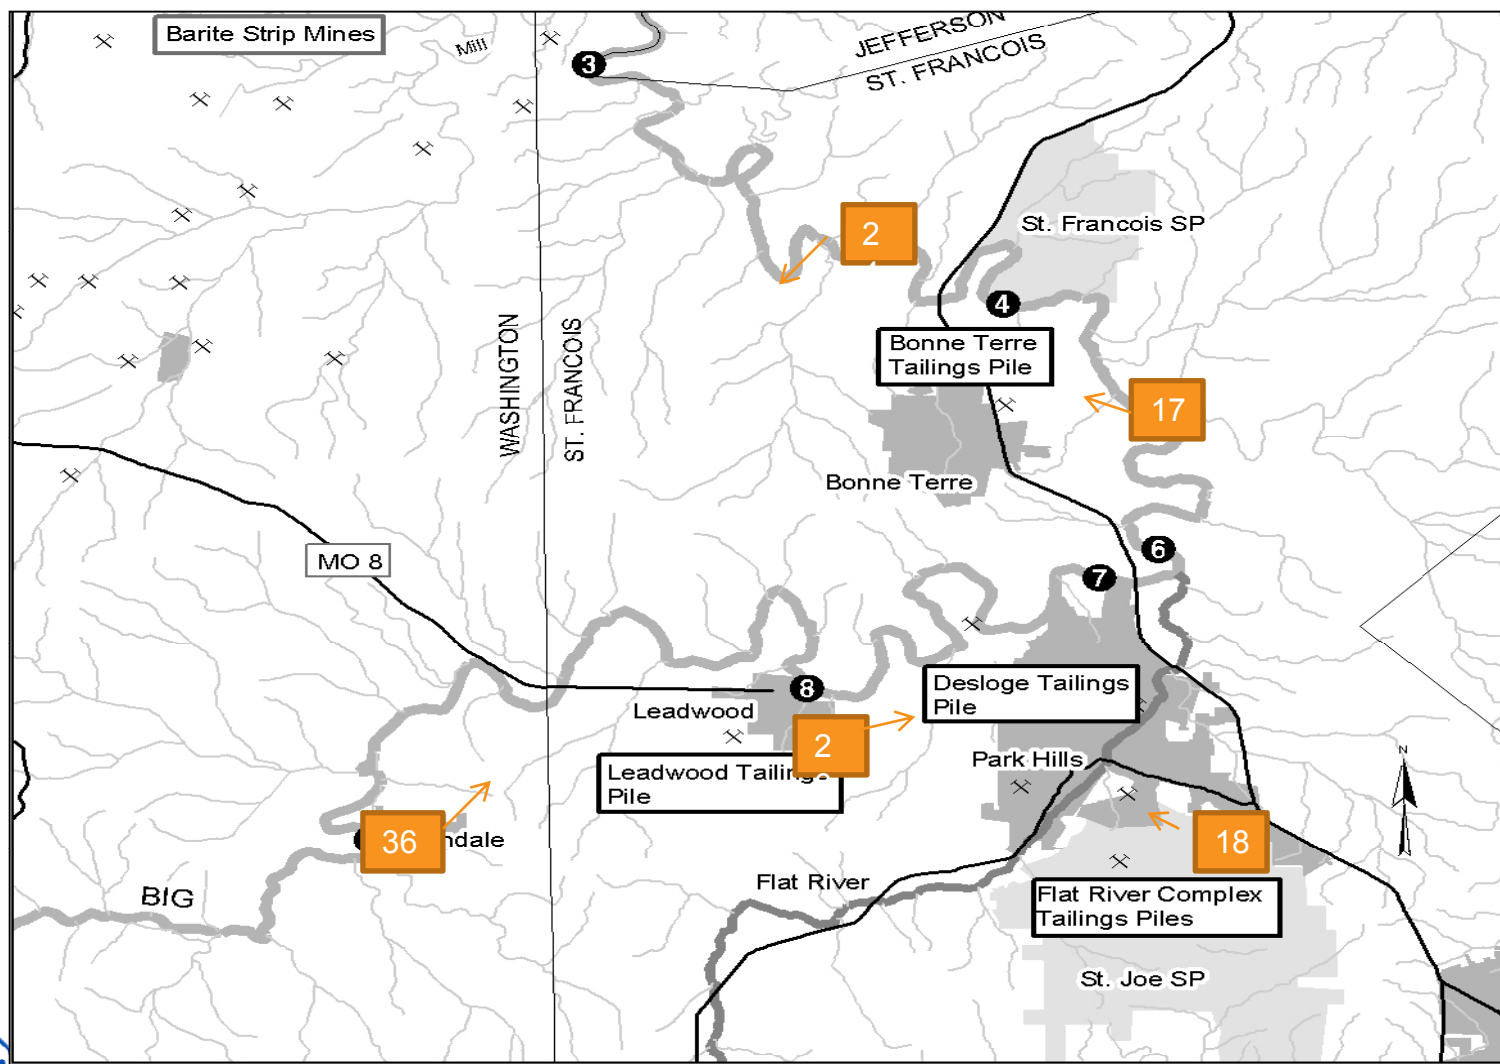

21st Annual NARPM Training Program

Kansas City, Missouri

◆ May 16–20, 2011 ◆

www.epanarpm.org

Species Richness – Big River through Mine Tailings

Big River – Results and Conclusions

Table 6-13: Macroinvertebrate Survey Results.

| Site Metric | BR04 | BR10 | BR25 | BR26 | BR32 | BKG11 | FL09 |
|-------------|------|------|------|------|------|-------|------|
| Richness | 24 | 17 | 26 | 26 | 36 | 36 | 18 |
| EPT Index | 4.6 | 3 | 5.2 | 4.8 | 6.2 | 8.6 | 3 |

- ◆ Using an HI value based on the Probable Effect Concentrations, excellent taxa richness and good EPT Indices are found at HI_{PEC} values below 5.
- ◆ Good to excellent species richness and acceptable to good EPT Indices were found at HI_{NAWOC} values below 1.5.
