Emerging Drivers for Cleantech: An EPA-University and Entrepreneur Roundtable October 26, 2009, 10 a.m. - 12:30 p.m.

10:00 - 10:15

Opening and Introductions Walter W. Kovalick Jr., Acting Deputy Regional Administrator

10:15 - 10:35

EPA's Role in Fostering Technology

10:35 - 11:10

EPA's Assets for Technology Developers and Entrepreneurs

- April Richards: Small Business Innovative Research Program (SBIR)
- Valerie Blank: Cooperative Research and Development Agreements (CRADA)
- Maggie Theroux: Environmental Technology Verification (ETV) Program Alan Walts: Supplemental Environmental Projects (SEPs)

11:10 - 11:30

Emerging Environmental Challenges

11:30 - 12:00

- :30 12:00
 Responses to EPA Information on Demand for Cleantech
 Allen J. Dines: President, Midwest Research University Network
 Dr. Kathy Banks: Professor of Civil Engineering, Purdue University
 Jeffery Perl: President, Chicago Chem Consultants Corp

12:00 - 12:30

Discussion of On-Going Dialogue with EPA about Cleantech

United States Environmental Protection Agency

SBIR Program Overview

- 11 Federal Agencies with SBIR Programs
- Program supports Small Businesses (fewer than 500 employees) to Develop Technologies that Agencies Need
- Budget:
 - -Automatic Set-Aside
 - -Total of \$2.3 Billion in 2009
- Phased Approach:
 - -Phase I proves Technical Feasibility
 - -Phase II promotes Commercialization

0

EPA-NSF SBIR Collaboration

- # 2009 Phase I Projects
 - EPA received 500 proposals, 98 passed peer review, will fund ~ 40
 - NSF received 1740 proposals and will fund ~300
- 2009 Budget: EPA \$5 Million, NSF \$175+ Million
- Phase I Awards (6 months): EPA \$70,000; NSF \$150,000
- Phase II Awards (2 years): NSF \$500,000, EPA \$300,000
- Supplemental Funding: NSF up to \$500,000, EPA up to \$120,000
- All EPA Topics covered by National Science Foundation (NSF)
- GOAL: Commercialize more Environmental Technologies

0

EPA SBIR Solicitation Topics - 2009

- Green Building
- Innovation in Manufacturing
- Nanotechnology
- Greenhouse Gases
- Drinking Water and Water Monitoring
- Water Infrastructure
- Monitoring and Control of Air Pollution
- Biofuels and Vehicle Emission Reduction
- Waste Management and Monitoring
- Homeland Security

0

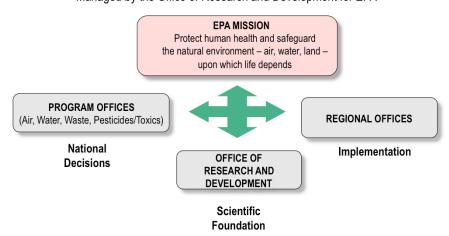

For More Information...

- Next SBIR Phase I Solicitations:
 - 1st NSF Phase I: Closing December 2009
 - EPA Phase I: Closing May 1, 2010
 - 2nd NSF Phase I: Closing June 2010
- NCER SBIR website: www.epa.gov/ncer/sbir
 - -2009 Phase I Solicitation (now closed)
 - -Searchable database of all funded projects
 - -SBIR Success Stories
- Contacts
 - -Jim Gallup, Program Manager (202) 343-9703
 - -April Richards, Deputy Program Manager (202) 343-9836

EPA's FTTA Program

- Focus of "technology transfer" is to get technologies developed by the Federal government into the marketplace
- Managed by the Office of Research and Development for EPA

(2)

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

FTTA Technology Transfer

- Collaborate with outside entities & assist transfer of Federal technologies
- Protect intellectual property through patents and licenses
- Cooperative Research and Development Agreements: Technologies can be codeveloped or jointly improved
- Material Transfer Agreements: Loan or donation of research materials from one party to another
- Outside User Agreements: Non-Federal parties can use EPA facilities for independent research for a fee
- Licenses: Technologies developed in EPA labs can be transferred to the partner for further development and/or commercialization

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

FTTA Case Study

- Biomass Concentrate Reactor
 - Co-developed technology with University of Cincinnati
 - Effective for treatment of environmental media where high biomass retention is desired for biodegradation
- Demonstrated simple, economical treatment of MTBE contaminated groundwater
- EPA & University CRADAs with other partners to develop technology to commercial application

RESEARCH & DEVELOPMENT
Building a scientific foundation for sound environmental decisions

Summary and More Information

- Expertise in Environmental Technologies
- EPA Research laboratories across the country: http:// www.epa.gov/epahome/locate3.htm
- Opportunities for CRADAs, Licensing
- EPA Tech Transfer Internet: www.epa.gov/osp/ftta.htm

Federal Staff:

Sarah Bauer, Program Coordinator 202-564-3267 / bauer.sarah@epa.gov Valerie Blank, Program Specialist 202-564-1720 / blank.valerie@epa.gov

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

Environmental Technology Verification (ETV) Program

Maggie Theroux, ETAV
Teresa Harten, ETV Director,
An EPA-University and Entrepreneur Roundtable
October 26, 2009

Office of Research and Development

National Risk Management Research Laboratory, Environmental Technology Verification Program

ETV Objectives

- Provide credible performance information for commercial-ready technology to help solve highrisk environmental problems. Help -
 - Purchasers in making decisions to purchase innovative technologies
 - Policymakers and Regulators in making policy and permitting decisions for innovative technologies
 - Vendors/Developers in selling and further developing innovative technologies
 - Financiers in making investment decisions to support commercialization

Office of Research and Development

- 420 technologies tested, 90 protocols completed since 1995
- Over 300 stakeholders active in advisory groups and technical panels
- Collaborations and vendor cost-sharing leverage ETV, generating 50% of total funds in 2004-7; 80-90% in 2008-9
- 2006 case studies document and project outcomes for 15 technology categories verified
- www.epa.gov/etv ... >1.5 M hits/year
- ETV international effort is in progress to develop a global verification system

Office of Research and Development

Ited States vironmental Protection Six ETV Centers

- ETV Air Pollution Control Technology Center
 - RTI International
- ETV Advanced Monitoring Systems Center
 - Battelle
- ETV Drinking Water Systems Center
 - NSF International
- ETV Greenhouse Gas Technology Center
 - · Southern Research Institute
- ETV Water Quality Protection Center
 - NSF International
- ETV- Materials Management and Remediation
 - Battelle

Office of Research and Development

Case Study for Drinking Water Treatment: Verify new membranes (microfiltration and ultrafiltration) for removal of microbials

- Up to 2,200 small drinking water systems need options to meet EPA's Long Term 2 Enhanced Surface Water Treatment Rule; conservative estimate.
- · 3 microfiltration and 6 ultrafiltration membranes were verified.
- City of Pittsburgh used ETV results to purchase full scale system and declared savings of \$5M over conventional treatment.
- At 25% market penetration (550 systems) of ETV verified membranes:
 - · Save \$1 to 8M in pilot testing
 - Prevent 2,700 to 13,000 cases of cryptosporidiosis/yr and 0.3 to 2 deaths/yr
 - Realize economic benefits from health savings of \$2 to 19M/yr.
- Verifications to be complete for 4 new membranes in Fall, 2009.

Office of Research and Development

Technology Innovation in
Enforcement:
Supplemental
Environmental Projects
(SEPs)

Alan Walts
Office of Enforcement and Compliance Assurance
Sept. 24, 2009

SEPs: Why and When

- Enforcement actions can provide a way to demonstrate new technologies.
- EPA's SEP policy:
 - Requires "nexus" between SEP and violation
 - Identifies acceptable types of projects
 - Determines extent of penalty mitigation
 - Policy available online: http://www.epa.gov/oecaerth/civil/seps/index.html
- Agreed SEPs are documented in settlement (administrative or civil)
- Many states also have SEP policies; requirements differ.

Use for innovative technologies

- Total value of EPA SEPs:
 - 2007: \$30 million
 - 2008: \$39 million
- Relevant SEP categories:
 - Pollution reduction
 - Pollution prevention
 - Environmental compliance promotion
- EPA can encourage, but not require SEPs

Where is the market?

- SEP Project Idea 'banks' (EPA, States)
 - List available at EPA's SEP website
- National and regional enforcement priorities
 - Indicate sectors where EPA is targeting enforcement
 - <http://www.epa.gov/compliance/data/ planning/priorities/>

Examples of innovative technology
SEPs

Some ideas for innovative SEPs:
green building practices
sustainable water infrastructure (use of gray water, etc)
carbon capture/sequestration
solar roofs, green roofs, stormwater collection on roofs
wind/solar energy investment
continuous emissions monitoring
pollution sensors for facilities or communities
water filtration

Innovative SEPs from the past that are now common-place:
Diesel retrofits
wood stove buy-backs
small engine replacement
