Receipt
The sample was received on 6/30/2021 2:20 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.6º C.

GC/MS VOA
Method 524.2: The continuing calibration verification (CCV) associated with batch 440-651006 recovered above the upper control limit for 1,3-Dichlorobenzene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 524.2: The laboratory control sample (LCS) for analytical batch 440-651006 recovered outside control limits for the following analytes: 1,3-Dichlorobenzene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Data Usability Summary

APPENDIX E

DATA USABILITY SUMMARY

La Habra Heights County Water District Well #10 (Intersection of Saragosa Street and Norwalk Boulevard, Whittier, California)
Montebello Land & Water Company Well #7 (344 East Madison Avenue Montebello, California)

GSI Environmental Inc. (GSI) reviewed the field methods and analytical laboratory reports for water samples collected at Montebello Land & Water Company Well #7 located 344 East Madison Avenue Montebello, California (Site #1) and La Habra Heights County Water District Well #10 located at the intersection of Saragosa Street and Norwalk Boulevard, Whittier, California (Site #2). Many of the water sampling events were conducted during the same mobilizations and some laboratory reports reflect combined data for both the La Habra Heights Well #10 site and the Montebello Well #7 site; therefore, this Data Usability Summary reflects the review and validation of data from both of the well sites. The data were collected to evaluate the following:

- The efficiency and effectiveness of four different types of Granular Activated Carbon (GAC) and four different types of Ion Exchange (IX) resin for per- and polyfluoroalkyl substances (PFAS) removal.
- The PFAS breakthrough through these media as well as the ability to remove PFAS compounds to below the RLs.

The laboratory reports were reviewed to evaluate data usability of the analytical results in accordance with the following guidance documents:

- USEPA, 2018, Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537 (EPA 910-R-18-001).
- United States Environmental Protection Agency (USEPA), 2017, National Functional Guidelines for Inorganic Superfund Methods Data Review (EPA 540-R-2017-001); and
- USEPA, 2017, National Functional Guidelines for Organic Data Review (EPA 540-R-014-002).

Project samples were analyzed by the following analytical laboratory:

- Eurofins Eaton Analytical of Monrovia, California (Eurofins)

At the time the laboratory data were generated for this project, the laboratory was accredited by the National Environmental Laboratory Accreditation Program (NELAP) and California Environmental Laboratory Accreditation Program (CA ELAP) for the matrices and methods of analysis.

DATA REVIEW

The data quality review included an evaluation of the following quality assurance/quality control (QA/QC) criteria:

- Preservation and Holding Times
- Blank Sample Analysis
- Internal Standard and Surrogate Recoveries
- Laboratory Control Samples

- Replicate Samples

For replicate samples, the relative percent difference (RPD) was used to evaluate the data. RPD was calculated using the following formula:

$$RPD = \frac{|x_1 - x_2|}{\bar{x}} \times 100$$

Where:

x_1 = analyte concentration in primary sample
x_2 = analyte concentration in duplicate sample
$\bar{x}$ = average of x_1 and x_2

Definition of Data Qualifiers

The following qualifiers were applied to a limited percentage of sample analytical data, as described in the following sections:

Qualifier	Definition
J	The result is an estimated concentration. The associated numerical value is the approximate concentration of the analyte in the sample.
UJ	The analyte was analyzed for, but not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Preservation and Holding Time

Samples were evaluated for agreement with the chain-of-custody by the laboratory upon receipt as well as the following:

- All samples were received by the laboratory in good condition and were in the appropriate containers with preservatives.
- All chain of custody paperwork was completed properly.
- The temperature inside the coolers for samples were within the acceptable criteria of 0 to 6°C upon receipt by the laboratory, except for the samples delivered to the laboratory within 24 hours which had receipt temperatures higher than 6°C. No qualifications were applied.

Samples were all analyzed within holding times except the following:

- Eurofins Lab Report 925810: alkalinity as $CaCO_3$ and TSS for LH-INF-20210325 and MB-INF-20210325 were analyzed outside of holding time.
    - The holding time for alkalinity as $CaCO_3$ using method SM2320B is 14 days. Samples LH-INF-20210325 and MB-INF-20210325 were collected on March 25, 2021 and Eurofins analyzed the sample on April 13 and April 14, 2021 (19 and 20 days later), respectively for alkalinity in $CaCO_3$. Alkalinity as $CaCO_3$ results for both LH-INF-20210325 and MB-INF-20210325 were flagged with J-qualifiers.
    - The holding time for TSS is seven days. Samples LH-INF-20210325 and MB-INF-20210325 were collected on March 25, 2021 and Eurofins analyzed the sample on April 2, 2021 for TSS (8 days later). TSS results for both LH-INF-20210325 and MB-INF-20210325 were flagged with UJ-qualifiers.

Method Blanks

No analytes were detected in laboratory method blank samples except for the following:

- Eurofins Lab Report 925810: arsenic was detected in the method blank for analytical batch 1316698 associated with samples LH-INF-20210325 and MB-INF-20210325. Results for arsenic for both samples were flagged with J-qualifiers.

Internal Standard and Surrogate Recoveries

Internal standard and surrogate recoveries were within project quality objectives except for the following analyses for PFAS compounds using EPA method 537.1:

Eurofins Lab Report 870644:

- Surrogate recoveries for two surrogates were high and outside laboratory criteria for sample GAC-5-20200512. Results may be biased high. Since the associated PFAS compounds were ND in the sample, no flags were applied.

Eurofins Lab Report 871876:

- Surrogate recoveries for two surrogates were high and outside laboratory criteria for sample GAC-1-20200519. Results may be biased high. Since the associated PFAS compounds were ND in the sample, no flags were applied.

- Surrogate recoveries for four surrogates were low and outside laboratory criteria for sample MB-INF-20200519. The associated PFAS compounds were ND. Since the sample results may be biased low, the UJ qualifier was applied. Compounds are listed in the table below.

Sample ID	Analyte Qualified with UJ
MB-INF-20200519	Hexafluoropropylene oxide dimer acid (HFPO-DA)
	N-ethyl Perfluorooctanesulfonamidoacetic acid
	Perfluorodecanoic acid (PFDA)
	Perfluorohexanoic acid (PFHxA)

Laboratory Control Samples

Laboratory control sample (LCS) and laboratory control sample duplicates (LCSD) recoveries and/or associated RPDs were within laboratory acceptance limits except for the following:

- Eurofins Lab Report 870644: LCS recoveries for PFTA using EPA method 537.1. The recovery exceeded laboratory criteria. However, based on the LCSD and RPD results, no data qualifiers were applied.

- Eurofins Lab Report 884399: LCS recoveries for 1,2,3-trichlorobenzene, 2,2-dichloropropane, naphthalene, and tert-amyl methyl ether using EPA method 524.2. LCS recoveries were high in each exceedance compared to laboratory limits; since these

analytes were ND in samples MB-INF-20200730 and LH-INF-20200730, no qualifiers were applied.

- Eurofins Lab Report 884399: RPD recoveries for 1,2,3-trichlorobenzene and naphthalene using EPA method 524.2. RPDs for these compounds exceeded laboratory criteria; however, since the corresponding sample results that were potentially biased high (based on LCS recovery) also were ND, no flags were applied for the RPD exceedance.

- Eurofins Lab Report 893261: LCS recoveries for bromochloromethane and chloroform using EPA method 524.2. Recoveries were high in each exceedance compared to laboratory limits; since theses analytes were ND in samples MB-INF-20200917 and LH-INF-20200917, no qualifiers were applied.

- Eurofins Lab Report 893261: RPD recoveries for 1,1,1-trichloroethane and chloroform using EPA method 524.2. RPDs for these compounds exceeded laboratory criteria; however, since these analytes were ND in the corresponding samples, no flags were applied.

- Eurofins Lab Report 909215: RPD recovery for tert-butyl ethyl ether using EPA method 524.2. Recovery exceeded laboratory criteria. However, the LCS and LCSD were within recovery limits; no flag was applied.

- Eurofins Lab Report 941985: LCS recovery for 1,3-dichlorobenzene EPA method 524.2. Recovery exceeded laboratory criteria. No LCSD was analyzed. However, based on the sample result being ND, no flag was applied.

Matrix Spike and Matrix Spike Duplicates

The percent recoveries for the matrix spike (MS), matrix spike duplicates (MSD), and RPDs for project samples were all within laboratory and method acceptance limits.

FIELD SAMPLING PROCEDURES

The following field and laboratory data were reviewed:

- Field notes with respect to field instrumentation calibration, sampling procedures, and preservation procedures prior to delivering the samples to the laboratory.
- Reportable data and laboratory report case narratives.

Section 3 of the report contains further details of sample collection procedures.

Field Precision

Field precision of system influent analysis was evaluated by comparing the RPD between results of field samples and field replicate samples. Eleven field replicate samples were collected from the following influent samples:

- MB-INF-20200424
- LH-INF-20200424
- LH-INF 20200512

- LH-INF-20200526
- LH-INF-20200609
- LH-INF-20200630
- MB-INF-20200724
- LH-INF-20200730
- MB-INF-20200813
- LH-INF-20200827
- MB-INF-20200917

Relative percent differences and absolute differences calculated for the primary and replicate samples were within data quality objectives, so no data qualifiers were applied. Field replicate precision calculations for all detected compounds in the sample pair are summarized in **Table E-2**.

SUMMARY

The analytical data were determined to be usable for the purposes of this pilot study. The data usability process resulted in qualification of 0.052% of the concentrations within the dataset. Qualified analytical data are presented in **Table E-3** with the associated data qualifiers. Qualifiers have been incorporated into the summary data tables that are provided following the report text.

Notes:

1. The detection limit was used to calculate Relative Percent Difference (RPD) for non-detect samples and result is reported as ">" RPD%.
2. $$RPD = \frac{|x_1 - x_2|}{\bar{x}} \times 100$$

Where:

RPD = relative percent difference

x_1 = analyte concentration in primary sample

x_2 = analyte concentration in duplicate sample

$\bar{x}$ = average of x_1 and x_2

3. A = Acceptable RPD; J = Estimated concentration
4. Only results detected in both the primary and duplicate sample are presented.
